Donor/Recipient Documentation

```
Recipient(string name, int age, string organ, string region, double priority);
```

- Creates a Recipient object.
- All internal is info, so if you want the name just do (Recipient object).name, etc.

```
Donor(string name, int age, string organ, string region);
```

- Creates a Donor object.
- All internal is info, so if you want the name just do (Recipient object).name, etc.
